**Introducing Eco-Sol Max from Roland. Advanced ink technology for brighter business solutions.**

Eco-Sol Max boosts the performance of the entire line up of Roland printers to give you everything you need, and more...

- Faster drying time
- Superior scratch resistance
- Virtually odourless
- Wider colour gamut
- Expanded media support
- Reduced production costs
- No daily printer maintenance required

## **Outstanding technology for outstanding results**

Discover what Eco-Sol Max can do for your business – visit one of our national showrooms.

*Succeeding together*

# Think Durability

## Superior scratch resistance

Eco-Sol Max features superior scratch resistance, critical to the production of outdoor banners and other graphics that involve complex finishing techniques.

## Higher ink density

Eco-Sol Max ensures rich solid colours are achieved. Stunning graphics can be produced that last for up to three years outdoors.

## No daily printer maintenance required

Eco-Sol Max enhances printer performance. Roland inkjet printers and printer/cutters require no major user maintenance, even after long inactive periods.

# Think Productivity

## Faster drying time

Eco-Sol Max produces quick drying graphics that bond more aggressively and can be handled right off the printer on a wide variety of substrates. This advantage means that take-up roller systems can be used for long, unattended production runs, even in high speed mode.

## Reduced production costs

Eco-Sol Max is cheaper than existing Eco-Sol ink, at an attractive price of £49.95 per 220ml cartridge and £84.99 per 440ml Cartridge.

## Expanded media support

Eco-Sol Max has ICC profiles available for a massive range of uncoated media.

# Think Versatility

## Virtually odourless

Eco-Sol Max ensures a highly comfortable working environment.

## Wider colour gamut

Eco-Sol Max ensures the production of vivid printing across the entire colour spectrum with expanded colour gamut for reds, blues and greens.

## Performs with Roland Rip software

Eco-Sol Max is designed for performance with existing Roland RIP software. Changing to Eco-Sol Max couldn't be easier.
